

SAFES

# Buying Guide

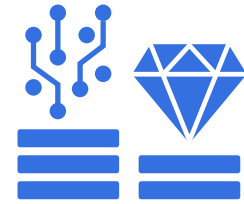

**MBG**  
SWEDEN

Sweden's leading safe manufacturer shares a guide.

This guide covers it all; safes for documents, digital media, weapons, jewellery, and valuables.

At work or at home.

# How to choose the right safe. Step 1.

**What are you storing?**

Cash and valuables, documents or digital media?

**What's the risk?**

Burglary, fire or both?

**How to open?**

Key, PIN code or fingerprint?  
Or dual lock?

Consider the value of what you're storing and how much space you actually need inside the safe. Remember — the interior of a safe is usually smaller than it looks.

**What's your budget?** With Sweden's largest range of safes, you're guaranteed to find one that fits.

What should your  
safe protect against?

### Theft protection

What you store determines what you need. Theft protection safes provide basic, uncertified protection. Security cabinets and S2 safes are tested and certified against burglary. High security safes graded I – VII represent the highest level of certified burglary resistance.

### Fire protection

Fire rated safes are engineered to protect paper documents, digital media, and magnetic media such as tapes or film. Different materials ignite or sustain damage at very different temperatures — so choosing the right safe for what you're actually storing matters.

**Almost every business has documents and valuables that need protection** from theft, fire, or both. A safe that meets your security and insurance requirements gives you effective protection.

**Many people are choosing a safe at home** instead of a bank deposit box for jewellery and irreplaceable family items.

# How to choose the right safe

**Theft-deterrent safes.**

Keep burglars away from your valuables. Cash, jewellery, passports, important documents.

Theft-deterrent safes offer basic security but hold no certification for burglary or fire protection.

**Burglary classified safes.**

Security cabinets are burglary-tested and certified to the Swedish standard SSF 3492. Protect keys, medications, tobacco, laptops, phones, cameras and much more.

**Fire rated safes.**

Fire rated safes and filing cabinets protect paper and documents from fire for 60–120 minutes.

Not burglary certified. For storing digital media, which is more sensitive to heat, a digital media insert is required for additional fire protection.

**Digital media. Fire protection.**

Digital media is far more sensitive to heat than paper and cannot be stored in a standard fire rated safe. Data media safes protect hard drives, USB drives, CDs and passports. Often watertight and drop-tested. For certified burglary protection we recommend a High security safe combined with a fire box.

**Business insurance** – Your insurance policy always determines which safe type and security level is required. The maximum amounts apply to cash. Valuables such as jewellery and watches can generally be stored at higher amounts. A safe connected to an alarm system allows even higher values. Always check with your insurer for specific requirements.

**Home insurance** – Your valuables don't have to be locked away, but irreplaceable items deserve proper protection..

**Mot stöld & brand. S2.**

Bästsäljare. Stöldskyddsskåp är certifierade enligt EN14450 mot stöld och enligt EN15659 mot brand. Förvarar främst värdesaker, pengar, värdepapper, pärmar. Godkänt brandskydd 30 & 60 min. Skåp under 1.000 kg bör fastbultas.

Ett fastbultat stöldskyddsskåp är ett bra alternativ till bankfack som idag avvecklas.

**Mot stöld & brand. Grade I.**

Värdeskåp grade I skyddar effektivt mot stöld och brand. Certifierade enligt Europenormen EN1143-1. Förvarar främst värdesaker, pengar, värdepapper, pärmar. Godkänt brandskydd 30 eller 60 minuter. Skåp under 1.000 kg bör fastbultas.

Rekommenderad beloppsgräns för kontantförvaring 80.000 kr.

**Mot stöld & brand. Grade II.**

Kraftiga värdeskåp grade II certifierade enligt Europenormen EN1143-1. Främst för värdesaker, pengar, värdepapper, pärmar. Godkänt brandskydd 60 minuter. Skåp under 1.000 kg bör fastbultas.

Rekommenderad beloppsgräns för kontantförvaring 140.000 kr.

**Mot stöld & brand. Grade III.**

Certifierade enligt Europenormen EN1143-1. Främst för värdesaker, pengar, värdepapper, pärmar, vapen. Brandskydd 60 min. Skåp under 1.000 kg bör fastbultas. Stora Värdeskåp Grade III väger mycket. Kontrollera så att bärigheten på golvet är tillräcklig.

Rekommenderad beloppsgräns för kontantförvaring 210.000 kr.

**Företagsförsäkring** – Företagets försäkringsvillkor avgör alltid vilken typ av skåp och säkerhetskrav som gäller. Maxbeloppen gäller kontanter. Värdesaker som smycken och klockor får generellt förvaras i högre belopp. I ett larmat skåp får ännu högre värden förvaras.

**Hemförsäkring** – dina värdesaker måste inte vara inlåsta men självklart är det viktigt att minnen förvaras säkert.

### **Kassaskåp för hem & kontor.**

De vanligaste och mest populära kassaskåpen. Skåpen kan förankras i antingen väggen eller golvet.

[Köp kassaskåp för hem & kontor](#)

### **Kassaskåp för laptops.**

Specialdesignade för laptop datorer. En idealisk lösning för skolor, kontor, IT-företag som vill ha en säker förvaring av datorer och samtidigt kunna ladda.

[Köp kassaskåp för laptop](#)

### **Kassaskåp för hotell.**

Designade för hotell, skåpen har en programmerbar pin-kod för gäster. MBG Sweden är en av Europas ledande tillverkare för hotellsåp.

Which fire rated  
safe do you need?

Which fire rated safe do you need?

**Fire rated safes for paper and documents.**

Paper ignites at 177°C. The insulating wall keeps the interior below that threshold. Protection time: 30, 60, or 120 minutes, tested to European and international standards. Not sure which level you need? Contact us.

[60 min](#) | [90 min](#) | [120 min](#)

**Fire rated data media safes.**

120°C is the maximum safe temperature for digital media, compared to 177°C for paper. These safes are engineered specifically for hard drives, USB drives, and optical media, with tighter temperature control. Contact us for guidance.

[30 min](#) | [60 min](#) | [120 min](#)

**Internal dimensions — check before you order**

Fire rated safes have thick insulating walls. That means less usable space than the exterior dimensions suggest. Always check the internal measurements before you order.

Key lock.

Electronic lock.

Fingerprint.

### **Key lock**

A key lock is the most cost-effective option — typically €100–200 less than a code lock equivalent. Straightforward, reliable, no batteries required.

[Köp kassaskåp med nyckel](#)

### **Electronic lock**

Electronic combination locks offer a range of security functions. Basic models support a master code and one user code. Advanced models add multiple user codes, audit trails, time restrictions, and silent alarm.

[Shop safes with electronic lock](#)

### **Fingerprint lås eller RFID**

Fingerprint locks support multiple users with an emergency key override. Some models also offer an electronic lock alternative. RFID open with access cards or tags.

[Fingerprint](#)

### **Dual Locking Systems**

Dual locking is mandatory on Grade IV safes and above. It can also be fitted to lower-grade high security safes and security cabinets when additional protection is required.

[Shop safes with dual locking](#)

### **Alarm Integration Kits**

Our alarm integration kits include the components needed to connect your safe to an existing alarm system. Available for our high-security safes and security cabinets. The equipment can be factory-installed on new units or retrofitted to existing safes. Please note that the final connection to your main alarm system must be carried out by a certified alarm installer. Contact us for details.

# Custom Safe Interiors

**Hanging folder frame.**

Practical hanging folder frames available for a wide range of our safes.

[Shop hanging folder frames](#)

**Låsbara fack.**

We recommend adding lockable compartments — they create separate access levels within a single safe. It's ideal for restaurants with multiple registers, hotels, schools, and similar environments. Available for most safes in our product range.

[Shop Lockable compartments](#)

**Additional shelves.**

More shelves, better organisation. Shelves are removable when you need open storage space. Available for most safes in our range.

[Shop additional shelves](#)

**Key racks.**

Organise keys inside your safe. Key racks mount to the inside of the safe door with double-sided adhesive tape — no drilling required..

[Shop key racks](#)

# Key considerations when buying a safe

**Door clearance.**

Most safes are right-hinged. Make sure there is sufficient clearance for the door to open fully. If you need a left-opening configuration, select models can be adjusted at the factory..

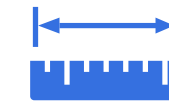

**Weight and floor capacity.**

High-security safes are heavy by design. Check the weight specification and verify that your floor can support the load.

All safes over 20 kg are delivered to ground level. We can arrange carry-in and installation on request.

Contact us if you need guidance..

**Choose the right size.**

You will likely want to store more over time. A good rule: choose one size up from what you need today.

# Installation

**Safe installation.**

Always anchor your safe to the floor. A safe that isn't secured is a safe that can be removed. Hard surfaces like concrete, stone, or brick provide the most secure base for fastening. Avoid surfaces with underfloor heating, cables, or piping underneath. If the safe needs to be mounted on wood or plasterboard, special bolts are required. Where bolt fastening is not possible, the safe can be secured with chemical anchoring adhesive.

Fire rated safes are prepared for floor anchoring only. Non-fire-rated models also have rear holes for wall mounting. Some safes do not come with pre-drilled holes — you can drill them yourself, or we handle it for you.

Note that drilling may affect the certification or fire protection rating.

Contact us before making any modifications.

We engineer our own safes. Built on what we know works. Protecting businesses worldwide since 2001.

We supply safes to banks, police authorities, government agencies, schools, municipalities, retailers, and private businesses across Sweden, Europe, and internationally.

We know our products inside out.  
Reach out — we respond fast.
